4. Survey background

About this data

This report is based on the latest International Passenger Survey (IPS) data released by the Office for National Statistics (ONS) on the morning of **19th December 2023**. The report covers provisional September 2023 data. Comparisons have been made to 2019 to show the rate of recovery, and also 2022 to show growth coming out of the pandemic. Please note revised Q3 data will be published on 24th January.

The IPS data is based on interviews with a sample of departing visitors. The number interviewed varies but is typically around 3,000 per month. Sample sizes at the monthly level and quarterly level (for some analysis and comparisons) can be low and results should be treated with caution, especially for spending. Please refer to the [ONS website](#) for information on confidence levels.

Please also note:

- All data is sourced from the International Passenger Survey by the Office for National Statistics.
- All figures quoted are not “seasonally adjusted”.
- Numbers in some tables / charts may not sum due to rounding.
- All values and percentage changes in spend are in nominal terms (i.e. not taking inflation into account).
- From 2021, data excludes the Irish land border data
- Figures in this report are rounded to align with the published ONS results

Refer to the [ONS website](#) for more on IPS methodology and UK outbound travel.

Please visit the [VisitBritain research webpage](#) for more detail on inbound tourism to the UK.

Important notice for interpreting data

The International Passenger Survey (IPS) was suspended on 16 March 2020 due to the coronavirus (COVID-19) pandemic. Interviewing initially began at UK airports at the start of 2021, though the IPS remained suspended at some sea ports and train stations during the year. To produce statistics for the periods impacted the Office for National Statistics (ONS) have applied the following processes to the data since March 2020:

- **March 2020** - With the data collected for most of March when the IPS was running the ONS had part of the data needed for the month. To produce estimates for the full month of March the ONS worked on the assumption that passenger characteristics in the second, unsampled, half of the month were represented by those sampled in the first half.
- **April – December 2020 (Q2, Q3, Q4 2020)** - The travel and tourism figures for this period are based entirely on administrative sources and modelling as no data was collected during this period. In producing these results the ONS have made assumptions that some previous trends have continued, for example, the proportions of passengers travelling for business or holidays.
- **2021** – The ONS were unable to restart interviewing at Eurotunnel (but continued at Eurostar) in Q4 2021 due to COVID-19 restrictions. The ONS has used passenger numbers to model the Eurotunnel data for this quarter. Data for those travelling via Dover was only collected from Q3 2021. In addition, no estimates are included for any travel across the Irish border. Please see [our 2021 inbound data page](#) for more information.
- **January to June 2022** – The ONS were unable to restart interviewing at Eurotunnel (but continued at Eurostar) during this period due to COVID-19 restrictions. The ONS has used passenger numbers to model the Eurotunnel data for Q1-Q2 2022. The ONS restarted IPS interviews at all ports from July 2022. Please see our [2022 inbound page](#) for more information.
